1), renderer: AMD Radeon Graphics (rembrand

Let's look closer at the prompt example:

```
./CVIP [-i=input_image.jpg]crop:0:0:1000:500[cropped][cropped]face_detection[-o=detected][cropped]mask:mask_filename.png[-o=masked]  
[-i=input_image2.png]face_blur:5[-o=blurred_original_size][blurred_original_size]scale_to_resolution:1920:1080[-o=blurred_good_resolution]
```

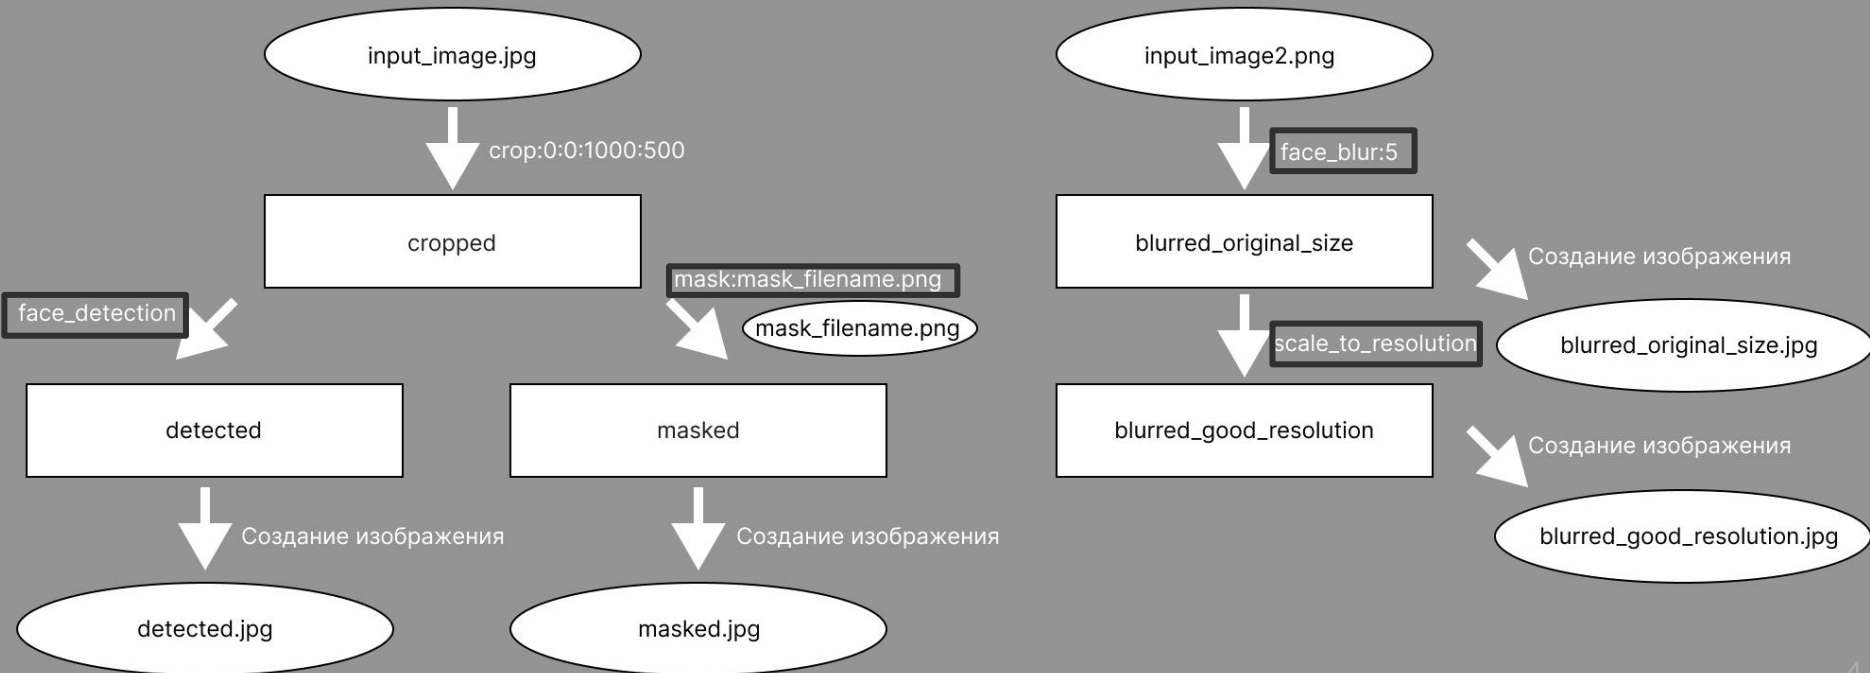

Image scaling

Original image

Resized image

Interpolation

Nearest neighbors

Bilinear interpolation

Bicubic interpolation

Models we've used for detection with comparison

Viola-Jones algorithm
with haarcascade

dlib

mediapipe
with blazeface

Face landmarks

dlib 68-points

dlib 81-points

blazeface 468-points

Face blur

Masking

Affine transformation
